Mr. Greg Reesor  
Project Manager  
United States Environmental Protection Agency  
726 Minnesota Avenue  
Kansas City, Kansas 66101

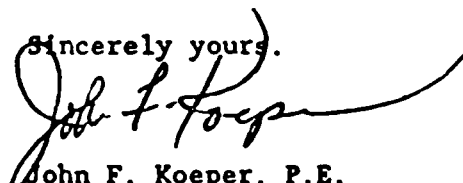

Dear Mr. Reesor:

At your request, we have reviewed the investigative report prepared by Mr. Kerwin Singleton of the Missouri Department of Natural Resources dated August 28, 1984. The report is titled: Abandoned/Uncontrolled Hazardous Waste Investigation - Preliminary Assessment - '301Z' Summary - Case No. 534.918.

Our limited records of the site appears to agree with the aforementioned report with the following additional comments. In July 1981 the MSD entered into a contract with Bennish & Bommarito Construction Company, Inc. to clean approximately 2.5 miles of Maline Creek a portion of which passed through the GAF and Certin-Teed site. Although we could find no written record an MSD employee, who was an inspector on the project, recalled that in the fall of 1981 or spring of 1982 the contractor - Bennish & Bommarito - spent approximately two (2) weeks picking up asbestos pipe along the creek bank and hauling it to a landfill. The pipe was embedded in a section of the north creek bank approximately three hundred (300) feet in length and eighteen (18) feet high. Due to the extensive amount of pipe buried in the creek bank, a decision was made to allow the contractor to incorporate the remaining pipe into the bank with available equipment.

We hope this information will help in your evaluation of the site. Please call or write if you have any further questions,

Sincerely yours,

  
John F. Koeper, P.E.  
Director of Operations
